ROBOTICS / COMPUTER VISION / AUTONOMOUS DRIVING

shchon11@naver.com github.com/shchon11 shchon11.github.io

RESEARCH EXPERIENCE

Undergraduate Research Intern

Feb 2026 - Present

Intelligent Robotics and Computer Vision Laboratory (IRCV Lab)

Hanyang University | Advisor: Soonmin Hwang

Ongoing research on RAW/ISP-aware object detection; manuscript in preparation. Broader interests include autonomous driving and camera-based sensor systems.

EDUCATION

Hanyang University

Mar 2021 - Present

B.S. in progress, Department of Automotive Engineering

HONORS & COMPETITIONS

Grand Prize

Jul 2025

4th International University Student EV Self-Driving Competition

9th place

Nov 2025

4th F1TENTH Korea Championship, ICCAS 2025

SELECTED PROJECTS

F1TENTH E2E

SOURCE

PyTorch batched simulation with DAgger/PPO, LiDAR-to-local-plan policies, and iLQR control. Calibration from 22 real recordings; policy evaluation is simulation only, with no on-car validation.

RAW-Autolabel

SOURCE

Prototype for cross-ISP, multi-view pseudo-label generation for object detection. Investigates annotation consistency across image processing pipelines.

HYU Formula Student

SOURCE

Simulation and algorithm development for the Formula Student Korea 2026 autonomous category, spanning perception, SLAM, planning, and control in ROS 2 / Gazebo.

FLIR multi-camera infrastructure

SOURCE

Eight-camera ROS 2 acquisition, calibration, PTP synchronization, and data export tooling for perception research.

METHODS & TOOLS

Learning & control PyTorch, DAgger, PPO, iLQR, YOLO

Robotics & data Python, C++, ROS 2, Gazebo, LiDAR, camera calibration, PTP, rosbag
